

Enron Administrative Corp. Workpaper for R97103

GISB Standard 4.3.59 (EII S33) states:

Providers of Customer Activities EBB/EDM sites should ensure that the site operates on the "Technical Characteristics of the Client Workstation" described in the appendix of the Electronic Delivery Mechanism Related Standards manual. This appendix, listing examples of hardware and software configurations that providers should meet, should be reviewed and updated by the Future Technology Task Force, at a minimum, by the spring of each year and presented to the GISB Executive Committee for adoption by the June meeting of that group.

The intent of the proposed standard below is to extend the scope of 4.3.59 to cover EDI/EDM and FF/EDM so that all three delivery mechanisms will be implemented in accordance with the appropriate versions of open technology standards, such as HTTP, HTML, and PGP.

Proposed Standard:

Providers of EDI/EDM and FF/EDM sites should ensure that these sites utilize the version and release level, or a fully compatible version and release level, of the technology standards listed in the Related Standards section of the GISB Electronic Delivery Mechanism Related Standards guide. The Future Technology Task Group should review the version and release level of these technology standards at a minimum of once per year, and recommend any changes to the Executive Committee for adoption by the June meeting of that group.
