

Comments Submitted by Andrew C. Dotterweich, Consumers Energy

The following are my comments on the draft mission statement.

The Market Standards Subcommittee (MSS) develops standard business practice (strikethrough: standards) (strikethrough: ,) and communication protocols (strikethrough: and model business practices) to advance the efficiency of the wholesale electric (strikethrough: power) market. The catalyst for such standards/protocols/practices by NAESB (through the MSS) will often be FERC actions, such as the future Standard Market Design final rules RM01-12), generation interconnection final rules (RM02-01 and RM02-12), regional transmission organization orders, or requests from market participants.(strikethrough: and other future market related)(strikethrough:)(strikethrough: initiatives not yet identified.) (strikethrough: The MSS will provide an open, collaborative forum for the wholesale)(strikethrough:) (strikethrough: electric industry to develop business practice standards associated with these and other market design)(strikethrough:)(strikethrough: initiatives. The MSS will also coordinate and communicate with FERC and other standards setting) (strikethrough: organizations as need to fulfill its mission.)
