

**Work Paper for April 15, 1999 Meeting
Trading and Netting Imbalances
Posted by El Paso Natural Gas**

Definition (modification):

Netting is the term used to describe the concept of offsetting imbalances (above tolerances, as applicable) for a Service Requester within an operational impact area.

Proposed Standard:

Netting and trading of imbalances should be accomplished based on the Transportation Service Provider's (TSP's) current method for accounting for imbalances.
