Transactional Information - Firm Transportation

TECHNICAL IMPLEMENTATION OF BUSINESS PROCESS

Transactional Information - Firm Transportation is a report from a **transportation service provider** detailing contract information for new or amended firm transportation contracts. The report identifies the **contract holder** as the entity with the contractual relationship with the transportation service provider. The agreement between the contract holder and the transportation service provider is known as the **service requester contract**. **Contract begin date** and **contract end date** are reported without respect to rollover or evergreen provisions which are contained in the Index of Customers should they exist.

The **rate reporting level** specifies the level at which the rate data is presented. Rate and surcharge information is reported using various data elements such as **surcharge indicator**, **rate identification code**, and **reservation rate basis**.

There may be multiple values for the **posting date** and **posting time** in a given transmission.

Location data need not be presented in every report. Location data should be presented in the following cases:

- Contract Status is 'New'.
- Contract Status is 'Amended' and Amendment Reporting is 'All Data'.
- Contract Status is 'Amended', Amendment Reporting is 'Changes Only', and location data has changed.

Transactional Reporting - Interruptible Transportation
TECHNICAL IMPLEMENTATION OF BUSINESS PROCESS

Interruptible Transportation Transactional Reporting is a report from a Transportation Service Provider. The report identifies the **Contract Holder** and the **Service Requester Contract**. The **Rate Reporting Level** specifies the level at which the rate data is presented.

There should be only one **Posting Date** and **Posting Time** in a given transmission.

Location data is presented for the entry only if the rate information is at the location level.

Transactional Reporting - Capacity Release

TECHNICAL IMPLEMENTATION OF BUSINESS PROCESS

Capacity Release Transactional Reporting is a report from a Transportation Service Provider. The report identifies the **Contract Holder**, the **Service Requester Contract**, and the contract begin date/time and end date/time. The **Rate Reporting Level** specifies the level at which the rate data is presented, and the **Reservation Rate Basis** and **Rate Form/Type Code** tell what kind of rate is presented.

There may be multiple values for the **Posting Date** and **Posting Time** in a given transmission.

Location data is presented for the entry only if the rate information is at the location level.
