

**Internet Look and Feel
Group* Proposal for Standards, Principles, and Definitions
January 14, 1998**

Proposed Revised Principles:

Informational Postings Web sites should be easy to locate.

Information within an Informational Postings Web site should be easy to locate.

Information across Informational Postings Web sites should be consistently displayed.

Information across Informational Postings Web sites should be easy to download.

I. A.

Proposed Standard:

"Informational Postings" should be the label used for navigation to or within the site.

The standard ' "Information Postings" should be labeled and displayed as such on the informational Web site. ' should be replaced with ' "Informational Postings" should be the label used for navigation to or within the site.'

I. B.

Proposed Standard:

TSPs should provide the addresses (URLs) for the following to the central site in a specified format:

- Informational Postings,
- Site Map,
- Affiliated Marketer Info.,
- Capacity,
- Index of Customers,
- Notices,
- Tariff

Proposed Standard:

The central site should provide a consolidated repository of the TSPs' URLs in both a central web site for navigation and as a downloadable list.

Proposed Explanatory Comments for Implementation Guide:

For purposes of GISB standards, Uniform Resource Locator (URL) is as defined by the Internet Engineering Task Force (IETF).

I. C.

Proposed Standard:

A userid or password should not be required to access the central site or the TSP's Informational Postings.

II. A. and B.

Proposed Standard:

The categories for Informational Postings required under standard 4.3.6 should be as follows:

- Affiliated Marketer Info.,
- Capacity,
- Index of Customers,
- Notices,
- Tariff

These categories should appear in the order specified above and before any others.

II. C.

Proposed Definition:

Site map definition will be presented by Tom Ehinger, Kim VanPelt, and Pete Whatley.

Proposed Standard:

Site Map should be the last hyperlink category of Informational Postings.

Proposed Revised Definition:

Display is the term used to describe the typical visual presentation derived by a browser as a result of retrieval of information from a given URL.
