Intraday Bumps:

- The TSP's web site for Scheduled Quantities has a requirement that a mechanism be in place that either allows reduced transactions to be displayed at the top or that allows the SR to select only those transactions that have been reduced. To allow SRs ready access to Intraday Bump information, TSPs should also provide a mechanism that either allows bumped transactions to be displayed at the top or that allows the SR to select only those transactions that have been bumped.
- Additionally, FERC Order 587G states that "Pipelines are to provide an interruptible shipper with advance notice that its scheduled volumes are to be reduced as well as notice of whether penalties will apply on the day its scheduled volumes are reduced". How will this be accomplished?

OFOs and Other Critical Notices:

- The body of the notification for OFOs and Other Critical Notices should be comparable regardless of media. An SR should receive the same notice via EBB/EDM, EDI/EDM or Email.
