Notes:

5.4.11 will need to have OT101 changed since we are not recommending a data element here but there are two code values; one of the code values will need to be deleted.

5.4.13 - BQT01 (transaction set purpose) has two code values but was not addressed by Interpretation 7.3.43 which addresses original vs. change in the Offer, Bid and Award downloads. We recommend that no data element is needed here and that code value "04 - change" should be deleted since Interpretation 7.3.43 does not address this transaction, and since it is the only transaction with multiple code values in this element that was not addressed by the interpretation.

5.4.13 - BQT02 (request for quote reference number) either needs to be given a data element name that will serve as a unique identifier for the transaction, or the notes for BQT02 that imply that this element has some business value need to be deleted. Technical recommends that these notes be deleted.
