

NAESB MARKET STANDARDS SUBCOMMITTEE

MISSION STATEMENT

DRAFT 3
01-10-03

The Market Standards Subcommittee (MSS) develops business practice standards, communication protocols and model business practices to advance the efficiency of the wholesale electric power market. The catalyst for such standards/protocols/practices by NAESB (through the MSS) will often be FERC actions, such as the future Standard Market Design final rules (RM01-12), generation interconnection final rules (RM02-01 and RM02-12), regional transmission organization orders, and other future market-related initiatives not yet identified. The MSS will provide an open, collaborative forum for the wholesale electric industry to develop business practice standards associated with these and other market design initiatives. The MSS will also coordinate and communicate with FERC and other standards setting organizations as need to fulfill its mission.
