

LDC Segment Proposed Standards

LDC.x.1 Documents submitted through the eTariff system should be text searchable and otherwise compliant with the Commission's GUIDELINES FOR SUBMISSION OF CDs, DVDs, AND OTHER ELECTRONIC MEDIA noticed April 12, 2007.

LDC.x.2 For tariff sheets submitted through the eTariff system containing the rates charged to their customers, interstate pipelines should supplement PDF versions with spreadsheets containing numeric rate components and where applicable, formulae used to compute total applicable rates.

LDC.x.3 For eTariff filing purposes, an interstate pipeline's tariff should be divided into "eSections" corresponding to individual rate schedules, current sections with the General Terms & Conditions and other logical groupings, e.g. maps, rates, cover page/table of contents & preliminary statement.

LDC.x.4 When an interstate pipeline submits a sheet based eTariff filing, the meta data should identify the eSection to which the sheet belongs. The meta data related to eSection should include the version number of that eSection that is being filed – similar to current practice where a pipeline indicates, e.g. "Fourth Revised Sheet 174" to indicate that there are three prior versions of Sheet 174.
